

An update of long-term trends in violent and property crime in New South Wales: 1990-2015

Derek Goh and Stephanie Ramsey

Aim: *The aim of this paper is to analyse the trends in the rates of annual recorded incidents of 10 categories of property and violent crime for the period 1990 to 2015 in New South Wales (NSW).*

Method: *Offence rates were calculated using criminal incident data from the NSW Police Force Computerised Operational Policing System (COPS) for the period 1995 to 2015, and the NSW Bureau of Crime Statistics and Research's recorded crime statistics report series for the period 1990 to 1994. Kendall's trend test was run on the 26 annual rates for each of the 10 offence categories.*

Results: *Some categories of crime in NSW are now at the lowest recorded levels they have been for over 25 years. Comparing per capita rates of crime in 2015 with per capita rates in 1990, lower rates were found for: robbery with a firearm (86% lower); motor vehicle theft (80% lower); break and enter non-dwelling (75% lower); robbery without a weapon (60% lower); break and enter dwelling (58% lower); murder (56% lower) and robbery with a weapon not a firearm (53% lower). Three of the ten offence types analysed in this report were found to have recorded rates higher in 2015 than in 1990: sexual assault (131% higher); other sexual offences (102% higher) and assault (62% higher).*

Conclusion: *In the period since 1990, assault and sexual assault rates recorded significant long term upward trends whilst the other eight offences analysed in this report were trending down or stable. The 2015 recorded sexual assault rate was slightly below the highest in that series (occurring in 2012) and the rate since 2000 has recorded a significant uptrend. Apart from sexual assault and other sexual offences, the remaining eight offence types recorded significant downtrends in recorded rates since 2000. The three robbery and three property crime series all recorded falls of more than 65 per cent since 2000.*

Keywords: *trends, crime statistics, property crime, violent crime*

Introduction

This brief is an annual update of the property and violent crime trends first reported in Moffatt and Poynton (2006). The aim of the paper is to examine the trends in the rates of annual recorded incidents of 10 categories of property and violent crime for the period 1990 to 2015 in NSW.

Method

Data

With the exception of murder, the data presented refer to the number of police recorded criminal incidents per 100,000 population.¹ For murder, rates are calculated on the numbers of murder victims per 100,000 population. Data from the NSW Police Force Computerised Operational Policing System (COPS)

have been used to calculate offence rates for the period 1995 to 2015. Criminal incident data for 1994 and for the years prior to the introduction of COPS have been taken from the NSW Bureau of Crime Statistics and Research's (BOCSAR) report series NSW Recorded Crime Statistics.

There have been three adjustments to the data series since 1995. The first two occurred in 2009 and 2011, respectively, and are outlined below in the Notes section.² The third occurred for the 2014 update. Due to improvements in data extraction, incidents of robbery without a weapon can now be more accurately classified and so incident counts for this category have been revised back to 1995. As such, some incidents that were previously classified as robbery without a weapon have now been moved into the other two categories of robbery.

Results

Violent crime

Figure 1 shows the number of murder victims in NSW per 100,000 population from 1990 to 2015. Figures 2, 3 and 4 show respectively the number of recorded assault, sexual offences and robbery incidents per 100,000 population from 1990 to 2015. The major points to note from these figures are:

- A significant downward trend is apparent in the NSW murder rate (down 56% since 1990) (Figure 1). In fact, the 2015 recorded rate of 0.9 murder victims per 100,000 population is the equal lowest in the series since 1990.
- Figure 2 for the recorded NSW assault rate shows two things: firstly the significant overall long term upward trend (up 62% since 1990) and secondly the drop back since the early 2000s. In the early 1990's the recorded assault rate was about 500 incidents per 100,000 population climbing to over 1,000 incidents per 100,000 population by 2001 and remaining around 1,000 to 2008. Since 2008 there has been a gradual decline (to around 825 incidents in 2015) such that the current rate of recorded assault is similar to that of the late 1990s. The increases in recorded assault during the 1990s may in part be due to increased reporting of these offences by victims (Ringland & Baker, 2009). Kendall's trend test on the series reveals a significant downward trend since 2000, and currently the rate of assault remains 23% below the 2002 peak.
- Over the period from 1990 to 2015, NSW recorded increases in the crime rate of both sexual assault (up 131%) and other sexual offences³ (up 102%, Figure 3). The increases in sexual assault and other sexual offences may be partly due to increased reporting of these offences by victims (O'Brien, Jones & Korabelnikoff, 2008). In both cases, the sharpest rises occurred in the

Incidents recorded per 100,000 population

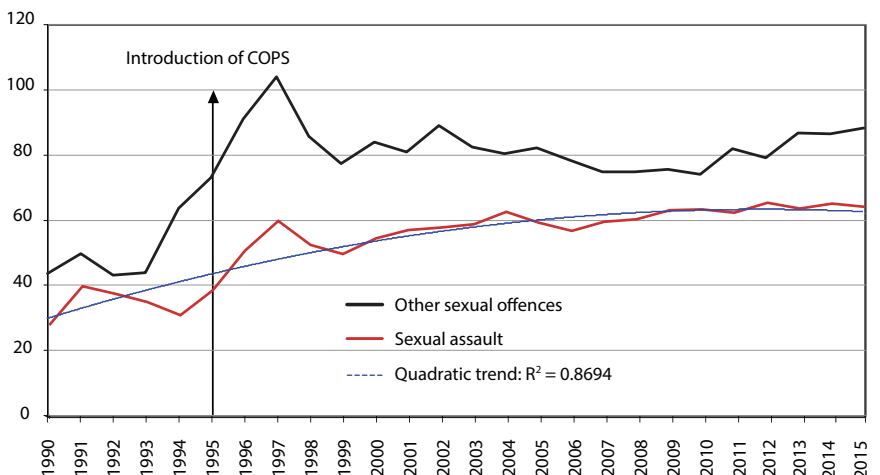

Figure 4. Robbery rate for NSW, 1990-2015

Incidents recorded per 100,000 population

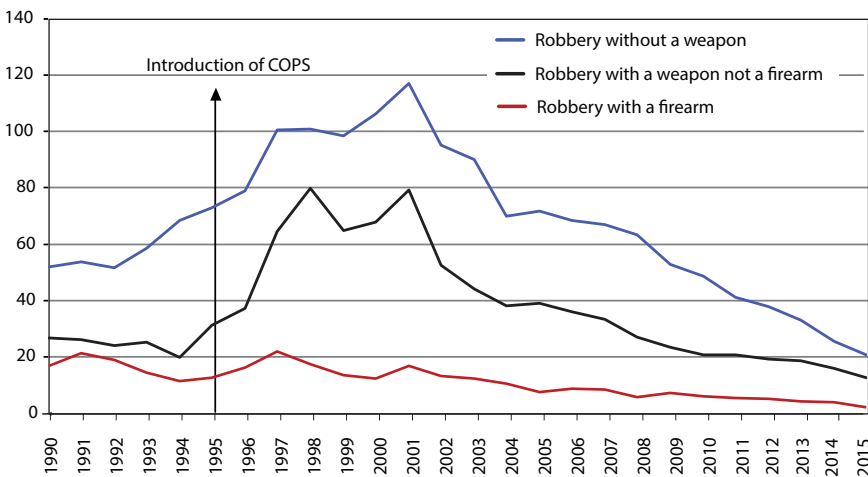

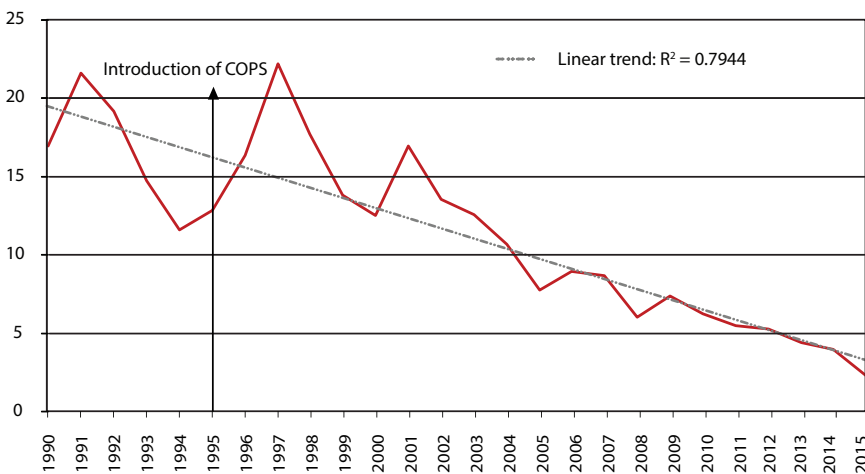

Figure 4a. Robbery with a firearm rate for NSW, 1990-2015

Incidents recorded per 100,000 population

mid to late 1990s and the statistical trend test for other sexual offences as reported in 2015 continues to be stable since 1990, despite the large percentage increase. Other sexual offences recorded a significant downward trend between 2002 and 2010 (see Figure 3) but has increased by 19% since then. Sexual assault, however, has continued the significant upward trend since 2000 (up 18%).

- Recorded rates of all three robbery offences are now below those seen around 1990 and continue to show declines (see Figure 4). All three robbery offences show a significant and consistent downward long-term trend since 1990: robbery with a firearm (down 86%); robbery without a weapon (down 60%) and robbery with a weapon not a firearm (down 53%). The 2015 rate for robbery with a firearm is almost one-eighth of the 1990 rate, when fitted to a linear trend (see Figure 4a).

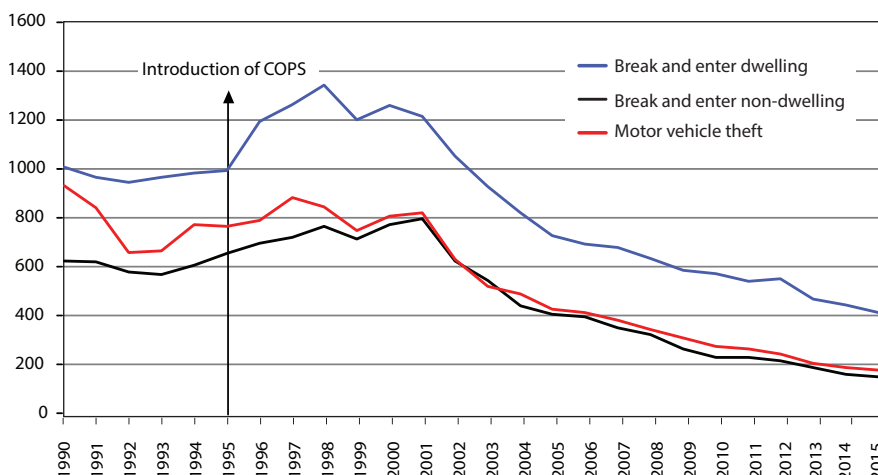

Property Crime

Figure 5 shows recorded rates for three major theft categories with significant downward trends since 1990: break and enter dwelling, break and enter non-dwelling and motor vehicle theft. The major points to note from this figure are:

- The overall shapes of the graphs for these offences show remarkable similarity. The rates of motor vehicle theft and break and enter non-dwelling continue to track one another closely as has been the case since the late 1990s. In fact the correlations between all the series in Figure 5 are 0.90 or higher since 1990.
- Recorded rates of motor vehicle theft continue to decline significantly (down 80% since 1990). After a fall in this theft category in the early 1990s, the incident rate began to increase from 1993 onwards. From about 1997, the rate of motor vehicle theft stabilised at around 800 incidents per 100,000 population and then dropped sharply from 2001 onwards, having registered a 77 per cent fall since then.

Figure 5. Burglary and motor vehicle theft rate for NSW, 1990-2015

Incidents recorded per 100,000 population

- Break and enter dwelling rates increased sharply in the late 1990s, but since 2001 have been on a monotonic decline as have the rates for break and enter non-dwelling and motor vehicle theft.
- All three property crime series shown in Figure 5 have more than halved since 2001 and are now well below the recorded 1990 levels.

Discussion

Some categories of crime in NSW are now at the lowest recorded levels they have been for over 25 years. Comparing per capita rates of crime in 2015 with per capita rates in 1990, the rate of:

- robbery with a firearm is 86 per cent lower;
- motor vehicle theft is 80 per cent lower;
- break and enter non-dwelling is 75 per cent lower;
- robbery without a weapon is 60 per cent lower;
- break and enter dwelling is 58 per cent lower;
- murder is 56 per cent lower, and
- robbery with a weapon not a firearm is 53 per cent lower.

The falls in these categories of crime are countered by increases in recorded rates of sexual assault, other sexual offences and assault. Comparing rates of crime in 2015 with those in 1990, the rate of:

- sexual assault is 131 per cent higher;
- other sexual offences is 102 per cent higher; and
- assault is 62 per cent higher.

Given that recorded crime data includes only crimes that come to the attention of the police⁴, and not all criminal acts are reported to the authorities, the trends in recorded crime presented here should be interpreted in conjunction with data from crime victim surveys.

A summary of these data is provided in Moffatt and Poynton (2006) and more recently in the 2014-15 Crime Victimization catalogue (Australian Bureau of Statistics (ABS), 2015). This ABS publication now contains seven consecutive financial years (2008-9 to 2014-15) of personal and household summary crime data obtained from a national survey, much of which is disaggregated to state level (see datacube summary). For NSW, the latest report states that physical assault for those aged 15 and over was reported to police 56 per cent of the time, with a personal victimisation rate of 1.6 per cent. For households, NSW break-ins were reported to police 80 per cent of the time, with a household victimisation rate of 2.0 per cent.

Conclusion

In the period since 1990, assault and sexual assault rates recorded significant long term upward trends whilst the other eight offences analysed in this report were trending down or stable. The 2015 recorded sexual assault rate was slightly below the highest in that series (occurring in 2012) and the rate since

2000 has recorded a significant uptrend. Apart from sexual assault and other sexual offences, the remaining eight offences recorded significant downtrends in recorded rates since 2000. The three robbery and three property crime series all recorded drops of more than 65 per cent since 2000.

Notes

1. For the rate calculations, population data were obtained from the 2015 Australian Bureau of Statistics publication: Regional Population Growth, Australia, 2013-14, Cat. No. 3218.0 (for population estimates 1995 to 2014). As no population estimates were available for 2015 at the time this report was prepared, rates for 2015 were calculated using 2014 population estimates. Another consideration is that Australian Bureau of Statistics (ABS) population estimates have slight revisions over time, which may impact on rates being slightly revised from previous updates of this report.
2. Prior to August 2008, if police suspected a criminal incident reported to them did not occur they could record it as 'doubtful'. In the past BOCSAR's recorded crime statistics have included 'accepted' and 'doubtful' incidents. In August 2008 NSW Police removed the 'doubtful' category from COPS, instead directing police officers to categorise these incidents as 'accepted' unless evidence existed to indicate the crime did not occur, in which case the incident would be categorised as 'rejected'. Thus, recorded crime statistics from August 2008 to the present have not contained 'doubtful' incidents. In order to present a continuous series recorded crime statistics have been restricted to only 'accepted' incidents. To do this, we removed the 'doubtful' incidents from crime data from January 1995 to August 2008. This resulted in a slight revision of incident counts (and hence rates) from 1995 to 2008 to those reported in earlier versions of this brief. As we are unable to view which incidents were doubtful in the period 1990 to 1994, the series were not adjusted in these years.

Until 2011, revision of NSW Police Force data by BOCSAR only revised incident counts for the immediate past 24 months of data. From 2011, due to improvements in data extraction, we are now able to revise the complete NSW Police Force data set back to 1995 each time we take a new data extract. Hence some series have been adjusted upwards for past years. This has not altered any of the long term trends. The average annual update for the tabulated counts in Table A1 was approximately 1.4 per cent (rates per 100,000 population are shown in Table A2). The 2011 revision is expected to be a once only adjustment of that size. Some incidents may only become accepted at much later dates than their report date, for example, a suspected murder where remains were only found, say three years after the initial report date. These longer term revisions arise because our crime data is compiled using report dates and some incidents may not be included in a current year if ongoing investigations mean that the incident has not been accepted by the time the extract is downloaded. This is more likely to occur for offences such as murder and sexual offences.

3. The offence category other sexual offences includes recorded incidents of indecent assault, acts of indecency, grooming/ procuring and other sexual offences (e.g. wilful and obscene exposure, peep or pry).
4. There may sometimes be one off events which can impact on collection of crime data such as the Sydney Olympics or NSW Police industrial action. For example, during November and part of December 2011, NSW Police Force industrial action meant that fewer incidents than expected were recorded for some offences, particularly those involving police enforcement and issuing of infringements. We estimate that due to the industrial action in the last two months of 2011, assault counts may have been around 1.5 per cent below expected recorded levels for 2011. The effect of the industrial action on other offences in this brief was expected to be well below 1 per cent for 2011. After sensitivity analysis we remain confident that there was negligible impact on statewide recorded trends from the 2011 NSW Police industrial action.
